Assignment -1

Python Programming

Assignment Date	12 September 2022
Student Name	Sivanandhini . R
Student Roll Number	820419104068
Maximum Marks	2 Marks

Question-1:

Consider a list (list = []). You can perform the following commands:

- 1. insert i e: Insert integer e at position i.
- 2. print: Print the list.
- 3. remove e: Delete the first occurrence of integer e.
- 4. append e: Insert integer e at the end of the list.
- 5. sort: Sort the list.
- 6. pop: Pop the last element from the list.
- 7. reverse: Reverse the list.

Initialize your list and read in the value of n followed by n lines of commands where each command will be of the 7 types listed above. Iterate through each command in order and perform the corresponding operation on your list.

Solution:

list=[1,3,1,5,2,4,1]
list.insert(5,6)
print('inserted list',list)
list.remove(1)
print('removed list',list)
list.append(7)
print('appended list',list)
list.sort()
print('sorted list',list)
list.pop()
print('popped list',list)
list.reverse()
print('reversed list',list)

Question-2:

Write a calculator program in python

```
Solution:
def add(x,y):
return x+y
def subtract(x,y):
return x-y
def multiply(x,y):
return x*y
def divide(x,y):
return x/y
print("Select operation")
print("1.Add")
print("2.Subract")
print("3.Multiply")
print("4.Divide")
While True:
choice = input("Enter choice(1/2/3/4):")
if choice in ('1','2','3','4'):
num1 = float(input("Enter first number"))
num2 = float(input("Enter second number"))
if choice == '1':
print(num1,'+', num2, '=', add(num1, num2))
elif choice == '2':
print(num1, '-', num2, '=', subtract(num1, num2))
elif choice == '3':
print(num1, '*', num2, '=', multiply(num1, num2))
elif choice == '4':
print(num1, ' / ', num2, ' = ',divide(num1, num2))
next_calculation = input("Let's do next calculation?(yes/no):")
if next calculation == " no ":
break
```

```
else:
print(" Invalid Input ")
```

```

    print(num1,"+", num2,"=",add(num1, num2))
                           print("Invalid Input")
                                                                                                                                                                                          Ln: 15 Col: 4
```

Question-3:

Write a program to concatenate, reverse and slice a string in python

```
Solution:

str1 = "Hello"

str2 = "World"

print("String 1:",str1)

print("String 2:",str2)

str = str1+str2

print("Concatenated two different strings:",str)

reverse_String = ""

count = len(str)

while count > 0:

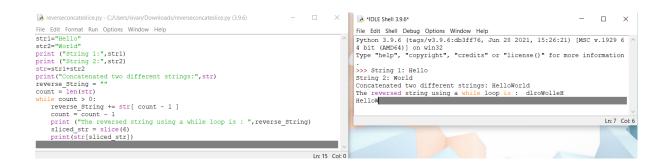

reverse_String += str[ count - 1 ]

count = count - 1

print ("The reversed string using a while loop is: ",reverse_String)

sliced_str = slice(6)

print(str[sliced_str])
```

Question-4:

Why python is popular programming language

Python has a simple syntax and in form of natural english language which helps lot of peopleto get a hold of what is coding in their first experience.it is highly flexible, reliable and fast to code.

Question-5:

What are the other frameworks that can be used with python?

Bottle,Flask,Django,Web2py,AIOHTTP,CherryPy,Dash Falcon

Question-6:

Full Form of WSGI

WSGI stands for Web Server Gateway Interface
